ConcreteSubject (sender)
canteenapp.models.Item
is_available, count
+ save(): is_available = (count != 0);
super().save() → Model.save_base() sends post_save
save() triggers send()
Subject (framework)
django.db.models.signals.post_save : Signal
+ connect(receiver, sender) [via @receiver]
+ send(sender, instance, created, ...)
Registration
apps.CanteenappConfig.ready()
imports canteenapp.signals
loads @receiver decorator
notifies registered receiver (sender='canteenapp.Item')
ConcreteObserver (function)
signals.remove_unavailable_item_from_cart
(sender, instance, **kwargs)
if not instance.is_available: Cart.objects.filter(item=instance).delete()
deletes rows
Affected state
canteenapp.models.Cart
